AHRQ Activities to Reduce Racial and Ethnic Disparities in Health Care

Introduction

Racial and ethnic minorities make up an increasingly large proportion of the U.S. population and constitute the majority of residents in certain regions. Historically, people in racial/ethnic minority groups are more likely than non-Hispanic whites to be poor, to lack a high school education, and to experience disparities in health and health care services.

The mission of the Agency for Healthcare Research and Quality (AHRQ) is to improve the quality, safety, effectiveness, and efficiency of health care for all Americans. Toward this aim, AHRQ supports research and other activities designed to improve quality and address disparities in health care for racial and ethnic minorities.

Continuing disparities in health care for racial and ethnic minorities are documented in the 2008 National Healthcare Disparities Report. AHRQ's efforts to address these disparities are evident through the Agency's continuing support of research grants, contracts, training opportunities, conferences, partnerships, and publications focused on minority health and disparity reduction.

This Program Brief briefly describes AHRQ’s activities related to racial/ethnic disparities in health care and health care services for the period 2007-2009. To learn how you can get more in-depth information about AHRQ’s disparities research, see the last page of this publication.

Selected Recent Publications

Asthma

**Cancer**

**Cardiovascular Disease**

---

**Scope of the problem**

- Lack of prenatal care in the first trimester and lower extremity amputations in patients with diabetes represented the largest disparities for blacks compared with whites in 2008.
- Large disparities remain for Hispanics and blacks in new AIDS cases. In 2008, the proportion of new AIDS cases was more than nine times as high for blacks and more than three times as high for Hispanics as for whites.
- American Indian/Alaska Native women are twice as likely as white women to lack prenatal care, and American Indian/Alaska Native adults are less likely than whites to receive colorectal cancer screening.
- During the period 2003-2006, only 54.6 percent of all adults with diagnosed diabetes had their hemoglobin A1c under optimal control. There also was a substantial gap between blacks and whites for this measure; 43.0 percent of blacks had their hemoglobin A1c controlled, compared with 60.5 percent for whites.
- In 2006, the percentage of patients with pneumonia who received recommended hospital care was lower for blacks (76.9 percent), Asians (75.8 percent), and Hispanics (74.2 percent), compared with whites (81.5 percent).

- Among high school graduates, blacks (13.0 percent) and Hispanics (11.6 percent) are more likely than whites (8.5 percent) to report poor communication with their doctor or other health care provider.

**Some recent improvements in reducing disparities in health care**

- From 2000 to 2006, the gaps between black and white children and between Asian and white children who received all recommended vaccines narrowed.
- From 2000 to 2005, the percentage of Asian women aged 40 and older who had received a mammogram within the preceding 2 years increased. Nearly 4.5 million women received effective screening for breast cancer in 2005.
- The percentage of Hispanic children with special health care needs (CSHCN) without health insurance decreased between 2001 and 2005-2006 (19.4 percent vs. 15.1 percent, respectively). Similarly, the percentage of poor and low-income CSHCN without health insurance also declined during the same period (21.8 and 20.3 percent, respectively in 2001 vs. 14.2 percent and 14.1 percent in 2005-2006).

**Diabetes**

**HIV/AIDS**

**Mental Health**

**Pregnancy and Birth Outcomes**

**Other Research**

**Current Research**

AHRQ supports an extensive portfolio of intramural and extramural research efforts focused on health care quality, safety, effectiveness and outcomes, access and affordability, and costs of care. Extramural research is supported primarily through grants and contracts, including research grants, cooperative agreements, training grants, and grants for small and large conferences. To learn more about AHRQ’s funding priorities and processes, go to [www.ahrq.gov](http://www.ahrq.gov). Examples are provided of current research projects (as of fall 2009) that are focused wholly or in part on identifying, studying, and reducing racial/ethnic disparities in health care.

**Research and Training Grants**

**Factors Affecting the Racial Disparities in Sudden Infant Death Syndrome (SIDS).** Rachel Moon, principal investigator, Children’s Research Institute, Washington, DC; AHRQ grant HS16892, project period July 1, 2008-June 30, 2010. African American infants are still twice as likely to die from SIDS compared with white, Asian, and Latino babies. The goal of this project is to develop information and tools to assist health care providers in educating African American families about infant safe sleeping environment.

**Unevenness of Physician Medicaid Participation with Communities.** Phillip Kletke, principal investigator, Governors State University, University Park, IL; AHRQ grant HS17490, project period July 1, 2009-June 30, 2010. This project will investigate why Medicaid patients in certain communities are concentrated into the practices of a small number of physicians, and why various groups of physicians respond differently to the community context in which they make Medicaid participation decisions.
Low Maternal Health Literacy: An Obstacle to Pediatric Health Care Utilization. Rosemary Frasso-Jaramillo, principal investigator, University of Pennsylvania, Philadelphia, PA; AHRQ grant HS17471, project period February 1, 2008-January 31, 2010. In this research project, a doctoral candidate will study whether a low-income, inner-city mother's ability to read and understand Medicaid recommendations for pediatric preventive care and immunization guidelines affects her child’s use of these services. The findings of this dissertation research will facilitate identification of at-risk populations and development of appropriate health literacy interventions with the ultimate goal of reducing racial/ethnic and socioeconomic disparities in use of children’s health care services.

Disentangling Disparities in Trauma and Mental Health Service Use. Sarah Gaillot, principal investigator, RAND Corporation, Santa Monica, CA; AHRQ grant HS18277, project period September 30, 2009-September 29, 2010. The aim of this doctoral research project is to identify and study variations between men and women and between different racial-ethnic groups in their exposure to trauma and their access to and use of mental health services to address the often serious and long-term effects of post-traumatic stress disorder.

Disparities in Diabetes Care: Health Plan Focus and Physician Responsiveness. Connie Trinacty, principal investigator, Harvard Pilgrim Health Care, Boston, MA; AHRQ grant HS18072, project period July 1, 2009-June 30, 2014. The goal of this research project is to identify and explore key health plan organizational factors (e.g., quality measurement process, product development and marketing strategies, participation in national disparities collaboratives) that may affect disparities in diabetes care; assess how well commonly used performance measures reflect underlying disparities in health care quality and outcomes among diabetes patients; and evaluate how providers’ awareness and responsiveness to systems-based quality initiatives may impact differences in management of patients who have diabetes.

Oregon Multidisciplinary Training Program in Health Services Research. Cynthia Morris, principal investigator, Oregon Health and Science University, Portland, OR; AHRQ grant T32 HS17582; project period September 30, 2008-June 30, 2013. This project provides support for predoctoral students and postdoctoral research trainees who are focusing their efforts on translating evidence into practice and policy, patient safety and quality, patient-centered care, and health disparities.

Partnerships

Federal Collaboration on Health Disparities Research (FCHDR). Developed by the Centers for Disease Control and Prevention (CDC) in collaboration with the Office of Minority Health (OMH) and cosponsored by AHRQ, FCHDR formed four expert workgroups responsible for identifying and supporting research priorities for cross-agency collaboration within the Department of Health and Human Services (HHS) that will hasten the elimination of health disparities. Subject-matter experts in the workgroups are focusing on four research topic areas: obesity, built environment (e.g., homes, schools,
workplaces, parks and recreation areas, business areas, transportation systems, etc.), mental health care, and comorbidities.

**Health Disparities Roundtable.** AHRQ and HHS’s Office of Minority Health cosponsor the Roundtable, in partnership with the Institute of Medicine (IOM). The mission of the Health Disparities Roundtable is to generate action and engage interested parties from academia, industry, government, philanthropy, the corporate sector, and the community in efforts to reduce racial and ethnic health disparities.

**National Business Group on Health (NBGH) Racial and Ethnic Health Disparities Advisory Board.** NBGH, OMH, and AHRQ are collaborating in a nationwide, comprehensive, community-driven approach to reduce racial and ethnic health disparities in the workplace and in businesses throughout the country. The Disparities Advisory Board promotes alliances between business, medicine, and public health organizations to improve the quality of health care for racial and ethnic minority populations, while supporting beneficiary health and employee productivity.

**Publications**

**National Healthcare Quality Report (NHQR) and National Healthcare Disparities Report (NHDR), 2008.**

Each year, AHRQ publishes these two congressionally mandated national reports that synthesize where we stand on more than 200 quality measures. The NHDR summarizes information about disparities in health and health care, including which racial, ethnic, or income groups are benefiting from improvements in care. Current and previous editions of the reports are available at [http://www.ahrq.gov/qual/measurix.htm](http://www.ahrq.gov/qual/measurix.htm). (AHRQ Publication Nos. 09-0001, NHQR; 09-0002, NHDR)

**Barriers and Drivers of Health IT use for the Elderly, Chronically Ill, and Underserved.** The AHRQ-supported Southern California Evidence-Based Practice Center (EPC) at Santa Monica, CA, reviewed and synthesized the available literature on the barriers and drivers of health information technology (health IT) use for the elderly, chronically ill, and underserved. This report identifies the gaps in the literature, how barriers for health IT use for these populations may be overcome, and outlines the areas that could benefit from future research endeavors in order to better assess the health information needs of these populations. Available at [http://www.ncbi.nlm.nih.gov/books/bv.fcgi?rid=hstat1b.chapter.6986](http://www.ncbi.nlm.nih.gov/books/bv.fcgi?rid=hstat1b.chapter.6986). (AHRQ Publication No. 09-E004)

**Minority Health: Recent Findings.** Presents brief summaries of recent findings (2005 through mid-2009) from AHRQ-supported research on health care for minority populations. (AHRQ Publication No. 09-P002)
Future Directions

AHRQ’s goal of reducing/eliminating disparities will be met through continued commitment to:

• Improving the quality of health care and health care services for patients and their families, regardless of their race/ethnicity, socioeconomic status, and literacy level.

• Continuing to improve the quality of data collected to address disparities among priority populations and subpopulations.

• Promoting representation and inclusion of racial/ethnic minority populations in all health services research activities.

• Monitoring and tracking changes in disparities by priority populations, subpopulations, and conditions.

• Identifying and implementing effective strategies to reduce/eliminate disparities.

• Partnering with communities to ensure that research activities are relevant to their populations and that the research findings are adopted and implemented effectively.

• Evaluating the importance of cultural competence and health literacy to health care disparities.

• Continuing to build capacity for health services research among minority academic institutions and minority investigators.
