

Decolonization of Non-ICU Patients With Devices

Section 13-1 – Staff Huddle Reminder: How To Address Chlorhexidine Bath or Shower Refusals

- **REMEMBER:** Your **enthusiasm** and **encouragement** are the greatest predictors of a patient's acceptance of the protocol.
- Tell patients:
 - This bath/shower will protect them from infection during their hospital stay
 - Chlorhexidine gluconate (CHG) is more protective than soap and water
 - CHG is used on millions of patients in hospitals across the country to clean the skin and protect patients from germs.
