Did you know...

57% of all diagnostic failures happen in ambulatory care.¹

79% of diagnostic errors are related to the patient-clinician encounter.³

1 in 20 patients who attend a primary care appointment this year will experience a diagnostic error.²

up to 56% of these errors are related to miscommunication during the patient-clinician encounter.³

Optimize diagnostic safety by engaging patients and families.

Encourage patients to share their story with the Be The Expert On You note sheet.

Build a collaborative environment using the 60 Seconds To Improve Diagnostic Safety strategy.
